Software Developer

SUMMARY

- Enthusiastic Software Developer with 4+ years of experience and a strong background in software development, passionate about solving complex problems. Proficient in Python frameworks and libraries, including Django, Pandas, machine learning, natural language processing (NLP), and MLOps. Strong understanding of object-oriented programming and software design principles. Skilled in developing and maintaining web applications, performing data analysis, and automating machine learning workflows using tools like CI/CD pipelines, MLflow, Apache Airflow, and AWS SageMaker. Always eager to learn new technologies and stay up-to-date with industry trends.

SKILLS

- Programming & Web Development** : Python, Java, SQL, Data Structures, Django, Flask, HTML, CSS, JavaScript, React, Bootstrap, Jinja, Unit Test
- API & Server**: REST APIs, Nginx, Git, GitHub, CI/CD, Docker
- Data Visualization**: MS Excel, Apache Airflow, Apache Superset, Power BI, Metabase
- Databases** : MySQL, PostgreSQL, Sqlite3, MongoDB
- Cloud & Tools**: AWS Cloud, Linux, Windows,
- Scripting & Data Handling**: Pandas, Advanced SQL

WORK EXPERIENCE

Software Developer

Jul '21 - Present

Shelter Associates(NGO)

Pune, IN

- Engineered backend features of internal web applications using Django and REST APIs reduced feature deployment time by **30%** through modular code design
- Optimised database queries and preprocessing logic, reducing API response time by over **60%**, improving system responsiveness and user experience
- Designed automated data ingestion scripts to synchronise AVNI platform data, resulting in a **75%** reduction in manual data entry time and minimising human error
- Established and monitored data pipelines, reducing data delivery latency by **40%** and increasing system uptime reliability by **25%**
- Configured **Apache Airflow** to orchestrate ETL workflows and replace legacy cron jobs, increasing reliability and flexibility in data task scheduling

Software Developer Consultant

Apr '23 - Present

Swadhar IDWC Pune(NGO)

Pune, IN

- Spearheaded digital transformation from manual data entry to AVNI-based systems, improving data accuracy by **30%** and reducing reporting time by **50%**
- Created and deployed **30+** custom survey forms and workflows, increasing field data collection speed by **40%** across multiple community programs.
- Authored SQL scripts to automate reporting workflows, reducing report generation time by **60%** and enabling real-time decision-making for **5+ program teams**
- Empowered stakeholders by enabling them to track key metrics and trends through dynamic data visualizations. Designed interactive dashboards to visualise **program KPIs**

EDUCATION

MS in Machine Learning & Artificial Intelligence

Jul '24 -

Liverpool John Moores University & UpGrad

Liverpool, England

Performing research thesis on "Explainability in Low-Resource and Multilingual NLP Applications"

Executive PG in Machine Learning & Artificial Intelligence

Mar '23 - May '24

IIIT Bangalore & UpGrad

Bengaluru, IN

Course highlights:

- Data Analysis in Excel | Analytics Problem Solving | Data Analysis using SQL | Introduction to Python
- Programming in Python | Python for Data Science | Inferential Statistics | Hypothesis Testing
- Introduction to Machine Learning and Linear Regression | Logistic Regression | Tree Models
- Introduction to Neural networks | CNNs, RNNs | Gesture recognition
- Introduction to natural language processing (NLP) techniques | lexical, syntactic, and semantic processing | Automatic ticket classification
- Introduction to MLOps and Advanced NLP techniques

Grade: 3.58/4 GPA

PROJECTS

Gesture Recognition Using Neural Networks

Oct '23 - Nov '23

Developed a deep learning model to recognize hand gestures using Recurrent Neural Networks (RNNs) and Convolutional Neural Networks (CNNs). Implemented data preprocessing, model training, and evaluation with Python, TensorFlow, and Keras, gaining expertise in time-series data and image-based classification.

Project Link -> [Github](#)

Automatic Ticket Classification Case Study Using NLP

Dec '23 - Jan '24

Developed a Natural Language Processing (NLP) model to automatically classify support tickets based on text data as part of a case study. Implemented text preprocessing, feature extraction, and model training using Python, Scikit-learn, and NLP techniques, enhancing automation and efficiency in ticket categorization.

Capstone Project: Sentiment-Based Product Recommendation System

Apr '24 - May '24

Developed a product recommendation system using sentiment analysis to personalize suggestions based on customer reviews as part of a capstone project. Utilized Natural Language Processing (NLP) and Machine Learning techniques with Python, Scikit-learn, and TensorFlow to analyze sentiments and enhance recommendation accuracy.
